ImageFinder For PC

With Cracked ImageFinder With Keygen you can find images, pictures or photos online in just seconds. Showing just a random image (without search results) it will be not that useful. But with the ImageFinder Advanced Search Filter you can enter any kind of image information, including date, file size, width, height and even a free text, and search the web for images that match the specification you set. Even when you are not sure whether you find the kind of image you want, the ImageFinder Advanced Search Filter can prove to be a really valuable tool to enhance your searching experience. Taking an image link (URL), you are presented with a list of results that contains a preview image and any related content. If you spot an image in the results that matches your specification, you can get a direct access to that image by clicking on the "download" link found in the individual result. ImageFinder comes with support for images, png, jpg, gif, jpeg and several other image formats. You can even use the main ImageFinder to upload your own pictures, where you can use as many metadata and keywords as you want. It is not possible to change the font size and the background color of the related images, but you can, of course, set any image search parameter you want. Furthermore, ImageFinder lets you bookmark sites in your Favorites, if that's what you want. And you also get a page in your browser history, where you can write a text description to always remember where you had found the picture. Several options are provided in order to satisfy your requirements. For instance, you are allowed to sort the images found by date, most popular, first link, size, image type or file format. Other functions are available as well. For instance, you can set the sort order, choose between two background colors, perform a keyword search, rename images and set thumbnails. It is also possible to delete images from the list (including the preview images), to modify the search query if necessary or to remove the search for a specific picture from your history page. ImageFinder is a lightweight application, since it comes with a very tiny sized installer. It can be saved to any removable device (like a USB flash drive), and it doesn't create any icons on your computer screen or memory, as it is instead always displayed in the system tray. Even though it provides a modest number of options, ImageFinder is an easy to use
