## QSL Maker Crack+ Free

QSL Maker Crack Mac is a lightweight Windows application built specifically for helping radio station amateurs create their own QSL cards. QSL Maker enables you to select the size of the card, specify the number of pages, choose the background color, insert the call sign and set its position on the card. Plus, you can import information from ADI, ADF, CSV, LOG, or plain text file. What's more, you can change the color of the table, add information about the name and address, customize the text messages in terms of font style, size, and color, as well as upload a file (BMP, DIF) that can be used as a background image. QSL Maker allows users to add details about the call sign, time and date when it occurred, radio frequency, signal report, and the mode of transmission used. It is possible to create multiple QSL cards and sort them by call sign. Plus, you can preview the cards before printing them. It is important to mention that hotkeys are also available for a better control over the entire process, but they cannot be reassigned. During our testing we have noticed that the tool offers good image quality and no errors showed during our testing. It manages to remain light on the system resources, so it doesn't hamper computer performance. To sum things up, QSL Maker offers a simple software solution when it comes to designing QSL cards. It can be easily configured and installed by all types of users, regardless of their experience level. The tool cannot be described as the most powerful one the market, as it still needs some improvements in the GUI area. Community Q&A Is there any way to save the results of the QSL designer (the QSL/MSL/DNS)? Thanks I've just installed this. It works well, but I find it a bit awkward that every time I try to close the program, it asks me if I want to save my changes before quitting. If I do not choose to save, the changes to the QSL card are lost, and I have to start from scratch. I would expect this program to save automatically. I'm a person who would rather have to make the effort to go back and re-enter my information than to have a program do it for me. I also find the explanation of features a bit vague, and I can't find a way to change them. The program was running well for about five minutes 77a5ca646e
