It is a theme pack which contains twelve high-quality wallpapers for each month of the year, to be placed on your desktop. It can be easily installed and configured, even by inexperienced users. All images have a widescreen resolution of 1920 x 1200 pixels, so they should fit all screen types, even the large ones; each picture represents a season. Unfortunately, the theme pack does not come with a built-in sound scheme. But, thanks to the default options provided by the operating system, you can access the desktop background area in Control Panel, in order to configure some settings. For example, you can make the wallpapers fit or fill the screen, or to appear centered, stretched or tiled. If you don't like any of the pictures, then you can deselect or remove them for the list. As for the remaining items, they can be set to transition at a user-defined time interval (between 10 seconds and 24 hours), in a consecutive or random order. The app does not put a strain on the computer's performance, since it uses a very low amount of CPU and system memory. Q: Are old stonework more likely to crack? Are the masonry blocks in an old house more likely to crack than new, i.e. built in say 2000 or 3000 years ago? How could you tell that a particular masonry block was made in 3000 years ago? A: The actual answer is "no", at least according to climatologists. The amount of shrinkage varies greatly from one place to another and usually depends on weather conditions (i.e. it is much smaller during cold periods). However, even considering all the factors together, the answer is, in fact, "no". Shrinkage reduces the amount of force pushing the bricks together, so from an engineering point of view, an old masonry block doesn't fail any more than a modern brick.
