## Simplify3D

### 4.2.1 [Multi]

the majority of delamination observed is in the z-axis direction. the parts that appear to show the greatest degree of delamination are abs based, with holes and shelves. this delamination may be caused in part by the infill percentage, and the resulting stress on the parts. poor delamination is also observed for some parts based on pla (weight-based parts), where there is insufficient infill. in order to stop or mitigate this delamination, infill percentages greater than 85% were used to test one of the weight-based pla parts - the part failed within the first 10 cm of the printed length of the part. 6) cura is doing this stuff but it doesn't like your model, but you want to see what is happening with the stl so you go into vs express for a moment and just in the stl previewer and you look at what is happening and notice in the low level view in vs that you can see your lines, that means that if you just left it to do whatever it wanted and did a render or print you would see the 0.4mm lines and 0.8mm walls. but instead your viewer isn't showing any of that. i mean what do you think that means? 7) cura is actually "solving" the issue for you but we need the info you provide us. the first thing we do is try to see if that's the way you want your print turned out. cura is asking how wide do you want the walls and how wide do you want the center part to be open because it will use that information to do the wall building. but if you just tell it to have walls that are like 1/2x 1/2 the walls, if you tell it to have no center part open, you are asking it to do things that will confuse cura so it does not know what to do. so you are actually telling it that you don't want any walls to the left and

---

right side of the center part to be open and if it does it will do it wrong. then you tell it to make the part open it will make it the center section open and one pass later it will do the thin lines around the outside of the wall and that will build it. it does not want to do it all at once as it doesn't want to build thin lines along the middle of your part. it is actually a single layer model that has walls and it does that single layer model first.

### **HACK Simplify3D 4.2.1 [Multi]**

to add the aws service provider in simplify 3d: open simplify 3d right click on the "simplify 3d store" icon in the tray bar. select "addons" from the context menu. select the addons link under aws for windows peter the photographer lives in bergen. his talent is soldered with his passion for photography and street photography.

he has made more than 4000 images. besides the normal photographs, he has a special interest in extreme photography. the most recent works are from the fukushima disaster. this experience has given him a new inspiration. peter loves gadgets and devices.

he has a darkroom in his apartment and and a place for photography in the garage. he thinks that his custom cameras are the perfect expression of the places he visits and the places he visits. check out a new version of the power analysis tool: simpli 3d power analyzer 2.0.0 has been released. this is a major upgrade from the last version in that it's power analysis of an entire printer, not just a single print. it also has a new "print testing" feature that prints a very small test pattern using a different material to detect key parameters, such as over-current and fan power. it's free and open source, and i'd love to get feedback on any issues you find with it. previously it was only available as a developer version, and the print-testing feature wasn't released. simplify 3d for amazon web services for windows now has a new network driver. this new network driver enables simplify 3d to access windows accounts and users when the aws.amazon.com service provider is enabled on the network. 5ec8ef588b
