I am trying to learn how to use it, but it keeps sending me back to Heroku's documentation and I am not really sure how to implement it. A: I have no experience with it, but after reading this post, I think it should be pretty straight forward: In the readme, I've seen there is one example of how to build a simple app that looks like this: heroku buildpacks:add --index 1 --app my-app --platform "ruby.java" In your case, the the continuous build and deploy should be working with these steps: git push heroku master heroku/heroku.systemd.poky.systemd I hope it helps.
