\_\_\_\_ Today I updated my PC to macOS Catalina 10.15.5 and also updated my PhotoShop to 2018. I also updated Adobe Presenter to the 5.3.1 release The change log states that its compatible with CS6, 7 & CC. Its great to know PhotoShop is getting the same updates as macOS I was absolutely stunned when Adobe introduced Photoshop Next in 2015. I knew the rumors and thought that this was just a test bed for a new coming software product. But it took nearly three years to release. In this time, they've surely abandoned Photoshop Next and moved to the next version. I don't know what's up with that, but I'm happy for them. I don't know what they are doing, but it's very good. With a program like Photoshop, which is so easy and quick to learn for those who just want to make a basic photo, it has to be done right. I don't know who the target audience is in this, but what I do know is that since I first learned to use Photoshop, I have consistently leveraged my ability to take pictures and be creative. Lightroom gives plenty of room for amateur photographers to learn and play with, and then those skills can be transferred into more complex software in Photoshop. Adobe Photoshop Elements 2018 is completely different than the old line of Elements. It's now cloud-based, as of March 2018. The amount of media storage is doubled, as well as image editing options. A new Playback Mode has been added, according to Adobe's website, which allows you to playback up to 4K videos at up to 60 frames per second. With quality graphics possible at full resolution (2448 x 3264px) and ek times beyond the quality available on stand-alone video editing units, much more can be done efficiently in a wide range of situations. When using E-M1 with Nikon's video and stills recorder (allowing for 4K output direct from the camera), this is an ideal solution for post-production. At the same time, use this same setup as a color corrector, color grading with Galaxy Note, or with high-end Cine lenses. With some work, the idea is that you could be shooting in 4K and editing color grade in Adobe Premiere Pro or Final Cut Pro in front of the same camera during the same session—in fact at the same time, since this is completely seamless, and no additional equipment needs to be purchased.

## What software is included with Photoshop?

You won't be able to succeed without software like Photoshop, so don't go in blind. As with so many software packages, it consists of the core program that you will always need—and hopefully, some other goodies to help you along the way. **What does the 2019 update bring?** In terms of significant changes for Photoshop, there have been some good, some not-so-great, and some eye-opening user experiences. Most likely, we'll always find limitations. Adobe has spent a tremendous amount of time and money on the new user interface, and we think it's the best yet. As for the upgrades themselves, one of our biggest, and possibly longest-sustained, updates has been Adobe Camera RAW (ACR). This update basically made ACR one of the fastest image picking applications available on the market, and since version 12.1, it's been completely overhauled. You can see a sample of the automation and speed gains. Again, since version 12.1, it has had an incredible range of improvements. Right after the significant changes came with the release of Lightroom CC 2018, Adobe released Lightroom Classic CC 2018, which is an entirely separate program that can import photos already applied to Lightroom CC 2018. It's fairly self-explanatory, and anyone looking to use the Classic software will be happy to upgrade immediately. Go to the Adobe Graphics Gallery to see how Adobe Photoshop support for modern web standards is making us all wonder what will happen in the future. e3d0a04c9c

When working on Photoshop, people often need some thing to do what someone else has already done. That's one of the many reasons why Adobe has introduced Dehaze, a refinement of its Dust Removal tool — a fast and simple way to remove dust and haze in photos. Now, Photoshop CC users can apply this capability to images in Photos and share the process on social media platforms. Dehaze is also now integrated with the new Enhance Filters feature, which lets you pair it with any creative filter. Using a pre-defined Tolerance, Dehaze will automatically remove the haze in selected areas of an image. Results may not be perfect the first time—you'll often need to retouch the areas left behind. Dehaze will be available as a free update for all Photoshop CC users in the coming months. Future versions of Photoshop also will bring Dehaze's power to future updates to the Apache Open Source Cockpit (APACHE), a tool that shows you what updates are currently available for your copy of Photoshop and where new updates are available. Dehaze is made possible by the work of Chief Scientist Baoshan Zhang, Principal Researcher David Sweeney and Research Scientist Sutapa Nandi. Furthering its AI efforts, Adobe Sensei is powering new features of Photoshop. Collaboration on projects can now be carried out with customers, colleagues and even their families – just in a browser. In the future, AI-powered creative workflows will also make it possible to apply your work across a range of devices, including tablets, iPhones and the Web. It'll even let you do this without leaving Photoshop, or even stopping your creative flow. There, creative professionals can use Intelligent Fill and Delete tools to remove and replace objects in images with a single action. Adobe says this is an example of what would be possible with AI-powered creative workflows.
