With enough practice, you will be ready to use the software, and in case you get lost, the default keystrokes help to initiate graphics editing tasks. But be careful with the toolset, what can you get if your mindset is not harsh enough. If you do not put in the time to practice and master the basic skills of Photoshop, you may get frustrated by the lack of control with Photoshop features. And when the features come handy and many creative new opportunities appear, you will lose interest, won't you? You can access a lot of web-optimised tools such as Photoshop Fix, Cloud Clipboard, and Web Photo service. In fact, is not it more fun to use your website as your creative space instead of having all the functions actually in place? It's easier to say what you don't want than what you do want in an image, so how do you find out what your photos want to communicate? The answer is, you have to shoot. But sometimes it's a struggle to take that camera off the tripod and work with it. The first thing that an accessory accomplishes is to establish a budget. Consider the possibilities of finding a piece in your size or finding a hobbyist who makes them to size. Plan an interim perimeter around your maximum budget. Take into account the cost of materials. How long it takes to execute a design? How much do you need to invest in a patterned fabric before the project is completed? The next thing an accessory achieves is to add a secondary dimension to your artistic vision, and that dimension is depth. In your photography, accessories can be used to establish a focal point, another angle of interest, a particular feeling, an emotion, and the feeling of layered depth. But like most things, there is a right and wrong way to shoot accessories. Also, accessories are trickier than you might think. Different types of accessories can change dramatically in appearance depending on how they are used.

The 2-Way Color Variations feature lets you preview colors, and then add or remove particular variations from the image. The feature allows you to see the colors separately, so you can make changes to the color and see how they'll look in the image.
