Again, Adobe's revamped Lightroom 5 is already impressive in its features. However, the issue is that it is still missing many things. Even after an upgrade, Lightroom is still a work in progress. The biggest issue has to do with the lack of printing options. I described this briefly in a previous article. Photography is developing rapidly, and the growth and improvements in the software are astounding. That said, I also realize I am not an avid photographer for that reason. I edited my photos, not taken them. I also like the fact that post-processing in Photoshop CS6 is part of the software and not some add-on or something that I have to download separately. I've been to the Polaroid Festival in Lancaster, England each year for the past decade. In addition to seeing a huge array of colors, some of which are truly eye-catching, the festival includes an exhibition of the best out of the "Polaroid Primary Collection" (originally released in the early 1980s). Each year the festival provides the public a chance to submit their own favorite photo (or several to choose from) and see what the average is. How has photography changed since the 20th Century? Skillfully executed photos using high-speed printing and a nicely designed camera were the standard. An entire ecosystem was required for the process. I tend to avoid being too personal. However, I will admit that I am not at all happy to see that, in the new version, Adobe removed the "Drive Time" colors. These colors provided a quick way to judge the quality of a given capture. I would still want to access them, or at the very least, be able to determine if a photo is severely underexposed or a bit overexposed. I think that the sparse inclusion of color editing is a direct result of this. I would have preferred some way to view these settings to know if they should be retained or simply gone. More generally, the raw reduction in functionality is a little sad to see. I am happy with Lightroom 5's performance and image rendering. What I do wish for is some improvements in the relatively new layer arrangement system. Sometimes I want things in the timeline to be specific to certain layers, while others are specific to the image. Admittedly, I haven't figured out any particular workflow that needs to have this implemented, but I do keep seeing the suggestion for this to be the way things are now, and I don't see exactly why the functionality should be confined to image layers and button them. If the layer functionality can be thought of in terms of the timeline, then I would feel more comfortable with something like that, as I would also be able to retain layers in separate albums.
